

Call Recording

Recording calls is a precautionary measure.

Nearly every call recording remains unheard, held securely encrypted in the cloud until it is automatically deleted after a few years.

But when a patient becomes abusive, or there is some confusion over critical contact information, or somebody complains about a member of staff, referring back to the call recording can save time and stress.

Quick and Secure Access

Surgery Connect can record all in and outbound calls or just those made or taken on particular extensions if preferred. Access to recordings is secured via password and encrypted connections - through the N3 network if you'd prefer.

Recordings are in stereo with each side of the call separated for maximum intelligibility and can be downloaded to a PC for use later.

Feature	Description
Recording	All in and outbound calls are recorded on specified extensions.
Pause & Resume	Pause & resume call recording from the telephone keypad
Delete	Managers are able to permanently delete call recordings from the Surgery Connect User Console complying with GDPR regulations.
